

Lawn Sprinkler heads water an average of 20 feet in diameter.

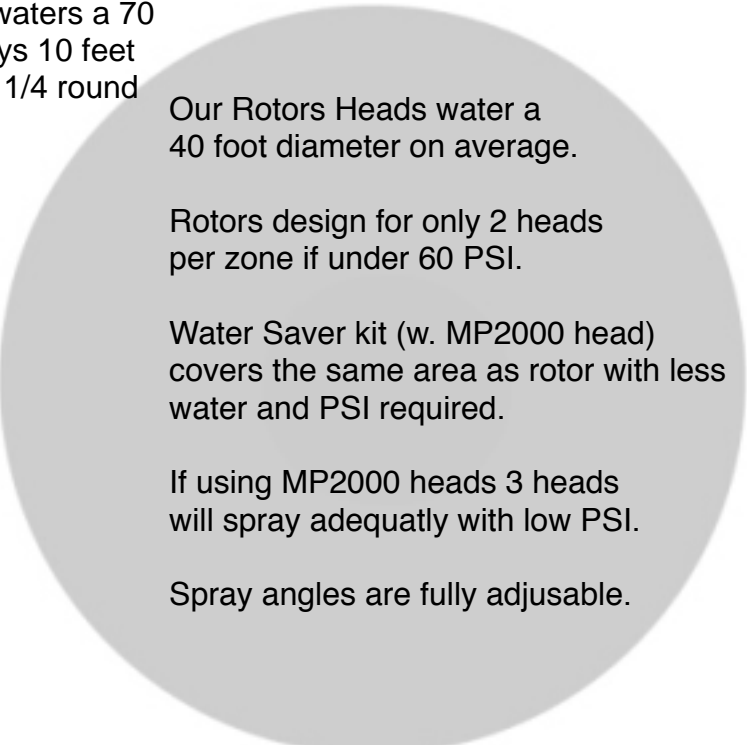

Design for 3 heads per zone. And overlap spray pattern slightly.

Attach multiple zones to a single spigot using a 4 way distributor.

Garden Border waters a 70 foot strip and sprays 10 feet on average with 1/4 round spray patterns.

Our Rotors Heads water a 40 foot diameter on average.

Rotors design for only 2 heads per zone if under 60 PSI.

Water Saver kit (w. MP2000 head) covers the same area as rotor with less water and PSI required.

If using MP2000 heads 3 heads will spray adequately with low PSI.

Spray angles are fully adjustable.

Orbit Softops water 10 feet on average (just like the Garden Border Heads) but are fully adjustable to any angle.
